SUMMARY

Computer Science student at Arizona State University graduating in May 2027, with experience in software quality assurance, backend development, and service-oriented web applications. Seeking Spring 2027 internships and entry-level software engineering opportunities beginning May 2027.

EDUCATION

Bachelor of Science, Computer Science

Arizona State University

May 2027

GPA: 3.38 (current)

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Distributed Software Development

TECHNICAL SKILLS

Programming Languages: C++, Java, C#, Python, JavaScript

Front-End: HTML, CSS

Tools and OS: Scheme, MATLAB, VS Code, Git, GitHub, Windows, Linux/Unix

PROFESSIONAL EXPERIENCE

Silentmode Sdn. Bhd. – Quality Assurance Intern

May 2025 – Aug 2025

- Internship for a software-development company specialized in developing solutions for retail and fuel retailers.
- Executed manual tests across retail and fuel-management software features, identifying and documenting bugs, usability issues, and performance inconsistencies to support developer debugging and issue resolutions before release.
- Documented defects using Jira and Excel, including reproduction steps, expected behavior, actual behavior, and supporting evidence to help developers efficiently debug and resolve software issues.
- Participated in team meetings and QA discussions and cross-functional team meetings to improve testing processes, strengthen product knowledge, and support continuous quality improvement.

OTHER WORK EXPERIENCE

Malaysian Students' Association (MySA) – President

Aug 2025 – May 2026

- Led a student organizational community of 140 members for Malaysian and international students, and delegating responsibilities across the leadership team.
- Directed the planning and execution of cultural and social events, overseeing logistics, timelines, officer coordination, and collaboration with other student organizations.
- Managed organizational operations and event planning to ensure programs were executed efficiently, professionally, and in alignment with the organization's goals.

JD Sports – Retail Sales Associate

May 2022 – Aug 2022

- Collaborated with team members to meet sales goals while maintaining a positive and supportive work environment.

ACADEMIC PROJECTS

C++ Compiler Front-End & Intermediate Representation System – Class Project

Summer 2026

- Developed compiler components in C++, implementing recursive-descent parsing, expression evaluation, symbol-table management, and semantic/type checking for a custom programming language.
- Built an intermediate representation (IR) for input/output, conditionals and loops by constructing instruction nodes, managing memory locations, and linking control-flow targets.
- Debugged parsing, memory, and control-flow issues using G++, Linux/WSL and Docker-based testing environments, applying systematic testing to diagnose segmentation faults, execution errors, and edge cases.

Healthcare Portal – Class Project

Spring 2026

- Developed a service-oriented healthcare portal to combine patient-management and healthcare utility functions within one web application.
- Implemented patient records, encryption/decryption, text filtering, and nearest-store lookup using C#, ASP.NET, WSDL/SOAP, RESTful APIs, and external web services.
- Built TryIt pages that accepted user input, invoked service endpoints, handled returned responses, and displayed results for testing.

Question-and-Answer Management System – Class Project

Spring 2025

- Collaborated on a role-based question-and-answer application to centralize user discussions and support question creation, editing, deletion, anonymous posting, and duplicate detection.
- Developed the user interface and application logic using Java and JavaFX, and used SQL with JDBC to store and retrieve users, questions, answers, and reviewer data.
- Developed automated tests for core question-management operations and displayed pass-or-fail results through the JavaFX interface.
