TECHNICAL SKILLS

Languages: Java, C/C++, Python, C#, SQL, JavaScript, TypeScript, HTML/CSS

Frameworks: React, Next.js, Node.js, ASP.NET, JavaFX, REST APIs

Developer Tools: Git, GitHub, Docker, Linux/WSL, Jira, VS Code, Visual Studio, Eclipse

EDUCATION

Arizona State University

Tempe, AZ

Bachelor of Science in Computer Science | CGPA: 3.38

Aug. 2023 – May 2027

- **Relevant Coursework:** Data Structures and Algorithms, Operating Systems, Distributed Software Development

PROFESSIONAL EXPERIENCE

Quality Assurance Intern

May 2025 – Aug. 2025

Silentmode Sdn. Bhd.

Bangi, Malaysia

- Tested a cloud-based fuel-retail platform integrating POS terminals, electronic payment systems, fuel dispensers, forecourt controllers, and backend services, validating end-to-end workflows across software and physical devices.
- Executed regression, sanity, and functional testings across transaction, fuel-pricing, payment, reporting, and fuel-management workflows in QA, staging, and User Acceptance Testing environments prior to releases.
- Identified, reproduced, and documented software defects in Jira and Excel, including reproduction steps, expected behavior, actual behavior, and severity information to support engineering triage and debugging.
- Participated in QA discussions and cross-functional team meetings with software engineers and product teams to collaborate on retesting fixes and validating functionality before issues progressed toward release.

OTHER WORK EXPERIENCE

President

Aug. 2025 – May 2026

Malaysian Students' Association (MySA)

Arizona State University

- Led a student organization serving a community of 140 Malaysian and international students while delegating responsibilities across the leadership team.
- Directed the planning and execution of cultural and social events, overseeing logistics, timelines, officer coordination, and collaboration with other student organizations.
- Managed organizational operations and event planning to ensure programs were executed efficiently, professionally, and in alignment with the organization's goals.

PROJECTS

Compiler & Intermediate Representation System | C++, Linux/WSL, Docker

Summer 2026

- Developed compiler components in C++, implementing recursive-descent parsing, expression evaluation, symbol-table management, and semantic/type checking for a custom programming language.
- Built an intermediate representation (IR) for input/output, conditionals, and loops by constructing instruction nodes, managing memory locations, and linking control-flow targets.
- Debugged parsing, memory, and control-flow issues using G++, Linux/WSL, and Docker-based testing environments, applying systematic testing to diagnose segmentation faults, execution errors, and edge cases.

Healthcare Portal | C#, ASP.NET, SOAP/WSDL, REST APIs

Spring 2026

- Developed a service-oriented healthcare portal to combine patient-management and healthcare utility functions within one web application.
- Implemented patient records, encryption/decryption, text filtering, and nearest-store lookup using C#, ASP.NET, WSDL/SOAP, RESTful APIs, and external web services.
- Built TryIt pages that accepted user input, invoked service endpoints, handled returned responses, and displayed results for testing.

Question-and-Answer Management System | Java, JavaFX, SQL, Eclipse

Spring 2025

- Collaborated on a role-based question-and-answer application to centralize user discussions and support question creation, editing, deletion, anonymous posting, and duplicate detection.
- Developed the user interface and application logic using Java and JavaFX, and used SQL with JDBC to store and retrieve users, questions, answers, and reviewer data.
- Developed automated tests for core question-management operations and displayed pass-or-fail results through the JavaFX interface.
